

Quick Start - Juman

1. Install PostgreSQL first

1. Open the release folder.
2. Run Install PostgreSQL.exe.
3. Remember the postgres password.
4. Confirm service postgresql-x64-16 is Running.

Details: PostgreSQL Installation Guide.pdf

2. Install Juman

1. Run Install Juman.exe as Administrator.
2. Follow the Setup Wizard:
 - Verify PostgreSQL
 - Enter host/port \ (defaults: localhost / 5432\)
 - Enter the postgres password \ (not saved to disk\)
 - Accept defaults for database juman and user juman_app \ (or customize\)
 - Allow secure app password generation
3. Wait until Validation succeeds and Finish shows SUCCESS.

3. First launch

1. Start Juman from the Start Menu or Desktop.
2. Use bootstrap credentials from:

%ProgramFiles%Jumanconfiginstall-credentials.txt

3. Complete the in-app first-run company/admin flow.

If something fails

- Report: %ProgramFiles%JumanlogsINSTALLER_CONFIGURATION_REPORT.md
- Steps: %ProgramFiles%Jumanlogsinstaller.json
- Re-open Setup Wizard from Start Menu -> Juman -> Setup Wizard
- Use recovery actions: Retry, Re-test connection, Restart PostgreSQL, Regenerate config, Re-run migrations

Juman never silently installs PostgreSQL. Always use Install PostgreSQL.exe first.
